

Chapter 1: Introduction to Nursing Research

Multiple Choice

Identify the choice that best completes the statement or answers the question.

- _____ 1. Quantitative research uses the following methods of data collection except:
 - 1. surveys.
 - 2. questionnaires.
 - 3. participant observation.
 - 4. psychosocial instruments.
- _____ 2. Knowledge is information acquired in a variety of different ways. Methods used to acquire this knowledge are referred to as:
 - 1. scientific integrity.
 - 2. scientific rigor.
 - 3. triangulation.
 - 4. ways of knowing.
- _____ 3. When a researcher uses a qualitative and quantitative approach to collecting data, this is referred to as:
 - 1. scientific integrity.
 - 2. scientific rigor.
 - 3. triangulation.
 - 4. ways of knowing.
- _____ 4. A type of research method emphasizing the meaning of an experience is termed:
 - 1. qualitative.
 - 2. quantitative.
 - 3. scientific integrity.
 - 4. scientific method.
- _____ 5. A group of individuals who collaborate on a research project from beginning to dissemination of findings are referred to as a:
 - 1. research consumer.
 - 2. research team.
 - 3. principal investigator.
 - 4. consultant.
- _____ 6. An example of a specialty journal is:
 - 1. *Nursing Research*.
 - 2. *Research in Nursing and Health*.
 - 3. *Oncology Nursing Forum*.
 - 4. *Western Journal of Nursing Research*.

Reading, Understanding, and Applying Nursing Research 5th Edition Test Bank

- _____ 7. Research that is done to examine findings of another researcher using the same variables but different subjects is referred to as:
 - 1. exploration.
 - 2. replication.
 - 3. empiricism.
 - 4. rigor.

- _____ 8. Who is the current director of the National Institutes of Nursing Research (NINR)?
 - 1. Dr. Rebecca Patton
 - 2. Dr. Julie Gerberding
 - 3. Dr. Patricia Grady
 - 4. Dr. Elias Zerhouni

- _____ 9. Nursing practice that relies on evidence from research and integrates those findings into clinical thinking and decision making is called:
 - 1. nursing science.
 - 2. evidence-based practice.
 - 3. scientific inquiry.
 - 4. scientific method.

- _____ 10. Which guideline for authoring a paper for publication is incorrect?
 - 1. Colleagues should be consulted when parties disagree on authorship matters.
 - 2. Avoid duplicate and fragmented publications.
 - 3. Authors should provide additional information as requested by editors.
 - 4. The principle investigator takes sole responsibility for the final manuscript.

- _____ 11. Which nursing degree program has a focus on planning and launching independent programs of research?
 - 1. Baccalaureate degree in nursing
 - 2. Master's degree in nursing
 - 3. Practice-focused doctoral program
 - 4. Research-focused doctoral program

- _____ 12. At a minimum, the nurse as research consumer is expected to:
 - 1. gather data through direct observation.
 - 2. read and evaluate research projects.
 - 3. author research papers for publication.
 - 4. participate in the design and production of a study.

- _____ 13. Striving for excellence in research with discipline, adherence to detail, and strict accuracy is called:
 - 1. rigor.
 - 2. triangulation.
 - 3. replication.
 - 4. scientific inquiry.

- _____ 14. A systematic inquiry designed to develop knowledge about issues important to nursing is called:
 - 1. scientific method.
 - 2. evidence-based practice.
 - 3. nursing research.
 - 4. nursing science.

- _____ 15. Which characteristic is unique to the scientific method and not associated with other ways of learning information?
 - 1. Objectivity
 - 2. Personal bias
 - 3. Subjectivity
 - 4. Logical reasoning

Chapter 1: Introduction to Nursing Research

Answer Section

MULTIPLE CHOICE

1. ANS: 3

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 2. Explain how the scientific method is applied in nursing research.

Page: 7

Heading: The Scientific Method

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Comprehension

Concept: Evidence-based practice

Difficulty: Moderate

	Feedback
1	This is incorrect. Quantitative nursing research uses traditional quantitative approaches, including surveys.
2	This is incorrect. Quantitative nursing research uses traditional quantitative approaches, including questionnaires.
3	This is correct. Quantitative nursing research uses approaches that can be quantified. Participant observation is used in qualitative research.
4	This is incorrect. The use of psychosocial instruments is a quantitative method that can be used in combination with interviews and observations to study a particularly complex phenomenon.

PTS: 1

CON: Quality improvement

2. ANS: 4

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 2. Explain how the scientific method is applied in nursing research.

Page: 5

Heading: What Is Research?

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Comprehension

Concept: Evidence-based practice

Difficulty: Moderate

	Feedback
1	This is incorrect. Scientific integrity refers to the ethical principles used in scientific research.
2	This is incorrect. Rigor refers to the discipline, scrupulous adherence to detail, and strict accuracy in scientific research.
3	This is incorrect. Triangulation is the use of qualitative and quantitative methods to collect data about a particular phenomenon.
4	This is correct. Methods used to acquire new knowledge are ways of knowing.

PTS: 1

CON: Evidence-based practice

3. ANS: 3

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 2. Explain how the scientific method is applied in nursing research.

Page: 7

Heading: The Scientific Method

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Knowledge

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is incorrect. Scientific integrity refers to the ethical principles used in scientific research.
2	This is incorrect. Rigor refers to the discipline, scrupulous adherence to detail, and strict accuracy in scientific research.
3	This is correct. Triangulation refers to the use of both quantitative and qualitative methods to collect data.
4	This is incorrect. Methods used to acquire new knowledge are ways of knowing.

PTS: 1

CON: Evidence-based practice

4. ANS: 1

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 2. Explain how the scientific method is applied in nursing research.

Page: 7

Heading: The Scientific Method

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Comprehension

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is correct. A research method that emphasizes the meaning of experience is termed qualitative research.
2	This is incorrect. Quantitative research is an approach for generating knowledge based on determining how much of a given behavior, characteristic, or phenomenon is present.
3	This is incorrect. Scientific integrity refers to the ethical principles used in scientific research.
4	This is incorrect. Scientific method is a systematic research process.

PTS: 1

CON: Evidence-based practice

5. ANS: 2

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 1. Describe the importance of nursing research for nurses.

Page: 4

Heading: Glossary of Key Terms

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Comprehension

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
--	----------

1	This is incorrect. A research consumer is a reader of nursing research whose objective is applying findings to nursing practice or using the findings to conduct further research.
2	This is correct. A research team is a group of people that collaborate on a research project from beginning to dissemination of findings.
3	This is incorrect. A group of people that collaborate on a research project from the beginning until the dissemination of findings is a research team.
4	This is incorrect. A research team collaborates on a research project from the beginning to the dissemination of findings.

PTS: 1 CON: Evidence-based practice

6. ANS: 3

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 3. Describe the nurse's role as a consumer of research.

Page: 10

Heading: Scholarly Publications and Practice

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Application

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is incorrect. Research journals are devoted to the publication of nursing research studies. Specialty journals narrow the focus to research on a particular type of nursing.
2	This is incorrect. Specialty research journals are devoted to a specific type of nursing.
3	This is correct. Specialty journals <i>are devoted to a specific type of nursing. Oncology Nursing Forum is an example of a specialty journal.</i>
4	This is incorrect. A specialty journal is devoted to a specific type of nursing research.

PTS: 1 CON: Evidence-based practice

7. ANS: 2

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 2. Explain how the scientific method is applied in nursing research.

Page: 6

Heading: The Scientific Method

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Comprehension

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is incorrect. Examining the findings of another researcher using the same variables but different subjects is referred to as replication.
2	This is correct. Research that is done to examine findings of another researcher using the same variables but different subjects is referred to as replication.
3	This is incorrect. Replication is the ability of researchers to repeat a study using the same variables with different subjects.

4	This is incorrect. The ability of researchers to examine the findings of other researchers using the same variables but with different subjects is called replication, while rigor is striving for excellence by involving discipline, adherence to detail, and strict accuracy.
---	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

PTS: 1 CON: Evidence-based practice

8. ANS: 3

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 3. Describe the nurse's role as a consumer of research.

Page: 13

Heading: Promoting Nursing Research

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Knowledge

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is incorrect. Dr. Patricia Grady is the current director of the National Institutes of Nursing Research (NINR).
2	This is incorrect. The current director of the National Institutes of Nursing Research (NINR) is Dr. Patricia Grady.
3	This is correct. Dr. Patricia Grady is the current director of the National Institutes of Nursing Research (NINR).
4	This is incorrect. Currently, the director of the National Institutes of Nursing Research (NINR) is Dr. Patricia Grady.

PTS: 1 CON: Evidence-based practice

9. ANS: 2

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 3. Describe the nurse's role as a consumer of research.

Page: 5

Heading: Evidence-Based Practice

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Comprehension

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is incorrect. Nursing science is the body of knowledge unique to the discipline of nursing.
2	This is correct. Nursing practice that relies on evidence from research and integrates those findings into clinical thinking and decision making is evidenced-based practice.
3	This is incorrect. Scientific inquiry is the process of critically analyzing data that have been gathered systematically about a particular phenomenon.
4	This is incorrect. Scientific method is a systematic research process.

PTS: 1 CON: Evidence-based practice

10. ANS: 4

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 4. Identify strategies for executing research responsibilities.

Page: 12

Heading: Promoting Nursing Research

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Comprehension

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is incorrect. Colleagues should be consulted when parties disagree on authorship matters.
2	This is incorrect. Duplicate and fragmented publications should be avoided.
3	This is incorrect. Authors should provide additional information as requested by editors.
4	This is correct. All authors review the final manuscript and take responsibility for the work.

PTS: 1

CON: Evidence-based practice

11. ANS: 4

Chapter: Introduction to Nursing Research

Chapter learning Objective: 4. Identify strategies for executing research responsibilities.

Page: 9

Heading: Research and the Entry-Level Nurse

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Knowledge

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is incorrect. Baccalaureate programs focus on the ability to read, understand, interpret, and apply research findings to clinical practice.
2	This is incorrect. Master's degree programs have a focus on evaluating research findings.
3	This is incorrect. Practice-focused doctoral programs focus on translating scientific knowledge into complex clinical interventions tailored to meet individual, family, and community health and illness needs.
4	This is correct. An element of research-focused doctoral programs is planning and launching independent research programs.

PTS: 1

CON: Evidence-based practice

12. ANS: 2

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 4. Identify strategies for executing research responsibilities.

Page: 8

Heading: Research and the Entry-Level Nurse

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Comprehension

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is incorrect. Nurses with advanced degrees may be expected to gather data through observation; however, at a minimum, nurses are expected to have the ability to read and evaluate research reports.
2	This is correct. The role of the research consumer includes the ability to read and evaluate research reports. Nurses are increasingly expected to maintain this level of involvement with research.
3	This is incorrect. Nurses with advanced degrees may author research papers for publication; however, at a minimum, nurses are expected to read and evaluate research reports.
4	This is incorrect. Nurses with advanced degrees may participate in the design and production of a study; however, at a minimum, nurses should be able to read and evaluate research reports.

PTS: 1

CON: Evidence-based practice

13. ANS: 1

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 2. Explain how the scientific method is applied in nursing research.

Page: 7

Heading: The Scientific Method

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Knowledge

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is correct. Rigor is the striving for excellence in research that involves discipline, scrupulous adherence to detail, and strict accuracy.
2	This is incorrect. Triangulation is the use of quantitative and qualitative data methods to collect data about a particular phenomenon.
3	This is incorrect. Replication is the ability of researchers to repeat a study using the same variables and methods or slight variations of them.
4	This is incorrect. Scientific inquiry is the process of critically analyzing data that have been gathered systematically about a particular phenomenon.

PTS: 1

CON: Evidence-based practice

14. ANS: 3

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 1. Describe the importance of research in nursing.

Page: 4

Heading: The Importance of Research in Nursing

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Knowledge

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is incorrect. Scientific method is a systematic research process.
2	This is incorrect. Evidence-based practice is using research findings to direct clinical care.
3	This is correct. Nursing research is a systematic inquiry designed to develop knowledge about issues important to nursing.
4	This is incorrect. Nursing science is the body of knowledge that is unique to the discipline of nursing.

PTS: 1 CON: Evidence-based practice

15. ANS: 1

Chapter: Introduction to Nursing Research

Chapter Learning Objective: 2. Explain how the scientific method is applied in nursing research.

Page: 6

Heading: What Is Research?

Integrated Processes: Nursing Process

Client Need: Safe and Effective Care Environment

Cognitive Level: Knowledge

Concept: Evidence-based practice

Difficulty: Easy

	Feedback
1	This is correct. Objectivity and the use of empirical data are unique to the scientific method and not associated with other ways of knowing.
2	This is incorrect. Personal bias is associated with other ways of learning.
3	This is incorrect. Subjectivity is associated with other ways of learning information.
4	This is incorrect. Logical reasoning is associated with other ways of learning.

PTS: 1 CON: Evidence-based practice

Chapter 2: Understanding the Research Process and Ethical Issues in Nursing Research

Multiple Choice

Identify the choice that best completes the statement or answers the question.

- ____ 1. A research design that examines relationships between and among variables is referred to as:
 1. longitudinal.
 2. correlational.
 3. prospective.
 4. retrospective.
- ____ 2. Nonexperimental research is often said to be weaker than experimental research in terms of:
 1. establishing whether a problem exists.
 2. establishing for whom a problem exists.
 3. documenting a causal relationship.
 4. all of the above.
- ____ 3. A situation where the identity of subjects remains unknown to protect subjects participating in a study is referred to as:

1. confidentiality.
2. human rights.
3. risk-benefit ratio.
4. anonymity.

- _____ 4. All of the following groups deserve special protection as subjects in research, except:
1. men and women over 65 years of age.
 2. children.
 3. prisoners.
 4. mentally ill.
- _____ 5. A researcher wants to determine if nurses' levels of empathy for patients change after graduation from nursing school. The following groups are measured: new graduates, nurses who have worked for 2 years, and nurses who have worked for 5 years, on empathy toward patients with a comparison of scores. This study is:
1. prospective.
 2. retrospective.
 3. cross-sectional.
 4. experimental.
- _____ 6. A researcher designs an experiment to test how variables interact to influence how well children learn. The main purpose of this study is:
1. description.
 2. explanation.
 3. influence.
 4. prediction.
- _____ 7. A study that follows a cohort of subjects and collects data over time is referred to as:
1. observational.
 2. retrospective.
 3. longitudinal.
 4. experimental.
- _____ 8. Individuals who provide data in a research study are often referred to as the:
1. population.
 2. data points.
 3. coding plan.
 4. sample.
- _____ 9. Which of the following statements is not true of an Institutional Review Board (IRB)?
1. An IRB assures that researchers do not engage in unethical behavior.
 2. All IRB members must have an affiliation with the institution.
 3. An IRB can use an expedited review process where there are minimal risks.
 4. Certain types of research are exempt from the IRB process.
- _____ 10. Providing subjects with an estimate of the potential risks in relation to the potential benefits is called the:
1. right to privacy and dignity.
 2. right to anonymity and confidentiality.
 3. risk-benefit ratio.
 4. right to self-determination.
- _____ 11. As a patient advocate, what is the nurse's role in carrying out research activities?
1. Determine if the study has been reviewed by the IRB.
 2. Report human rights violations to the patient's physician.
